Today

- Introductions
- Motivation and goals
- A random “laundry list” (really had a different word ...)
- Syllabus
- To our subject

Firefox (windows)

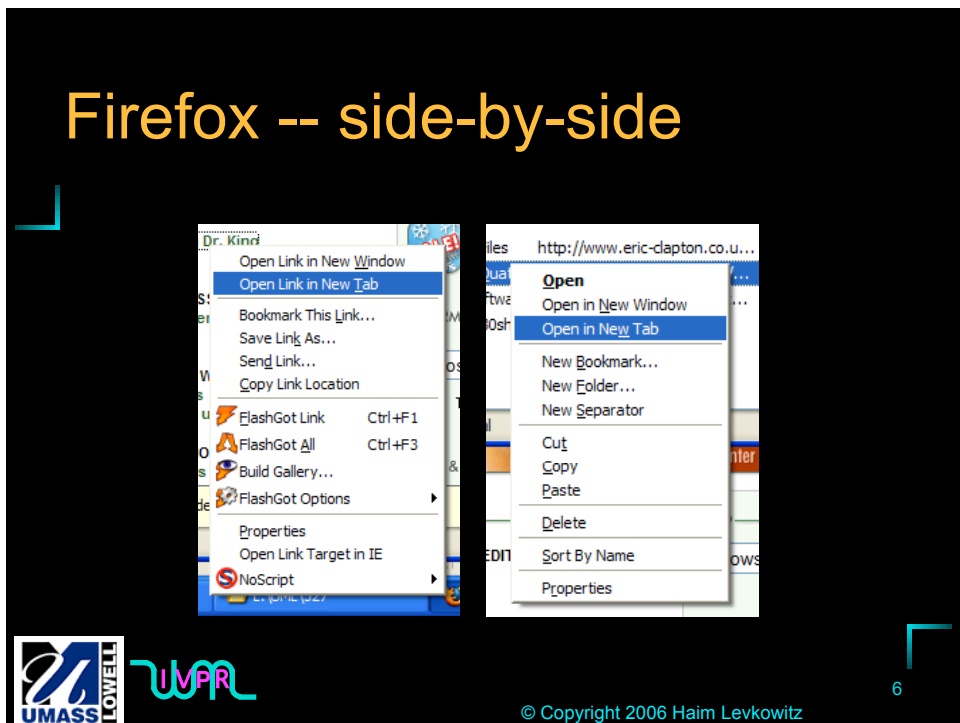

4

Firefox -- bookmark

Firefox -- side-by-side

Adobe Acrobat

- Letter: "Sign then seal"
- Digital equivalent: sign then password-protect
- But Acrobat: only password-protect then sign.

Thunderbird (mac)

On the mac:

- want to use anything other than Safari & Mail?
- have to use them to define your default app.
- no (known/provided) way to set up preferred Internet applications outside of their app's
- Of course, when enter Mail, even only to tell it you don't want to use it, you have to go through entire setup, which will "grab" all your mail, and (apparently) will mess up your mail setup -- if you had one before.

13

On Windows:

Copy files

- Problem with one copied file ==>
- 1. stop with error window (only option = OK); rest of copy stops
 - Why not continue w/ all others?
- 2. Information provided insufficient:
 - no path of culprit
 - No info what has/n't been successfully copied
- Ideally,
 - provide all that info
 - give user option to continue / stop.
