

91.451, Robotics II  
Prof. Yanco  
Spring 2003

## **Lab 1**

Out: Thursday, 30 January 2003

Due: Thursday, 6 February 2003

*Overview:* In this lab, you'll start to learn Pyro, then create a simulated world for your robot that models the 3<sup>rd</sup> floor of Olsen Hall.

For this lab, use the first PyroModule, called PyroIntroduction. This packet was distributed in hard copy during the lab, but you should refer to the on-line versions, as changes may be made to the modules. The on-line versions are linked from the course web page.

Next Thursday, turn in the code that generated your world. If you are unable to print the world, show it to me on the screen.
