Assignment 1: Examples of Cool HRI Applications

Out: Tuesday, 10 September 2013
Due: Tuesday, 17 September 2013

For next week’s class, please prepare a 5 minute presentation on a “Cool HRI Application” that you find. Having a video to show of your application is nice, but not necessary. However, without a video, you should have some photos of the robot system.

You can use the classroom’s computer for your presentation, or you can connect your own to the projector. (If you are using your own computer and your computer needs an adapter to connect to a standard VGA cable, bring your adapter to class with your computer.)

You will need to turn in a short write up that includes the citation(s) for where you located the HRI application you presented (URL, paper or book citation, etc.) as well as a short summary (1 paragraph is fine) of the application and why you think it’s cool.

You might want to think of this assignment of a way to start thinking about a project idea for the class.

(This assignment is to be completed in addition to the usual paper summaries.)
