

Mobile + Cloud

The future of computing is
(just about)
Here Now

Haim Levkowitz

www.cs.uml.edu/~haim

haim@cs.uml.edu

In the Beginning 2000

Then ...

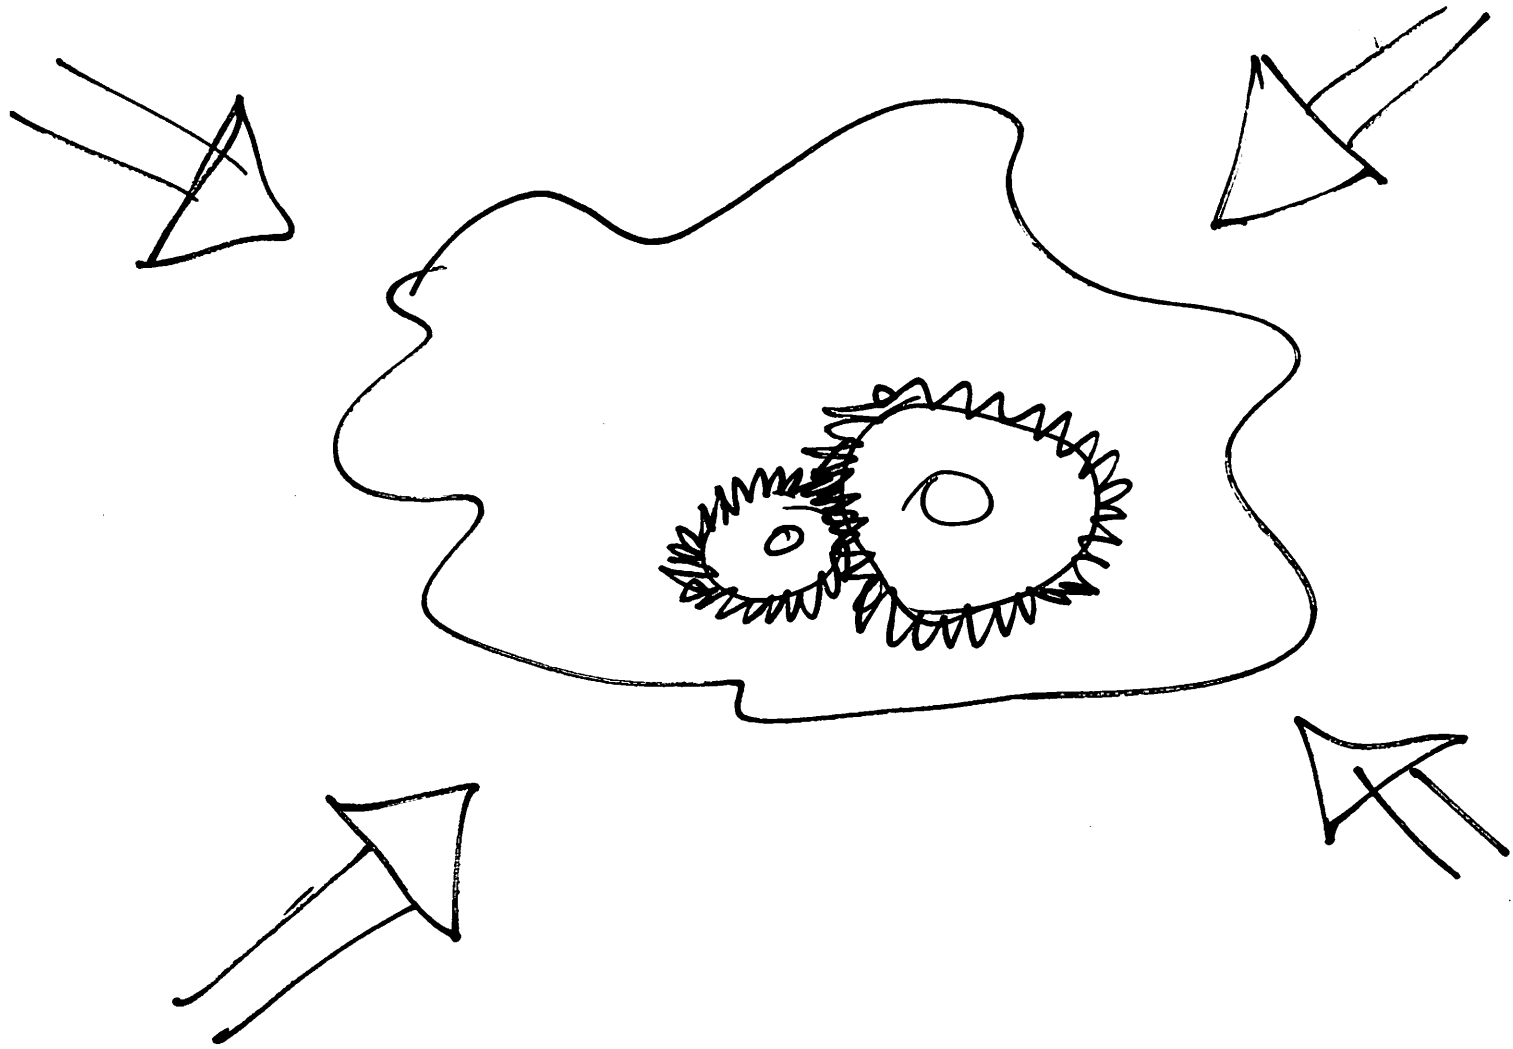

"smart(er)?"
PC

Then ...

The "Cloud"
(aka Internet)

And...

Now ...

Future...

But, first:

1. Smart phones?

2. Pay bills online?

3. With smart phone?

Future....

1. YES, and...
2. YES, and ...
3. YES

(almost everybody)

Plus

Need more computing?

- * Amazon
- * Google
- * etc.

Need (more) storage?

Which reminds me....

Backup, anybody?

mfh (Shame on you)

(or)

mfh

(hats off)

Backup!!

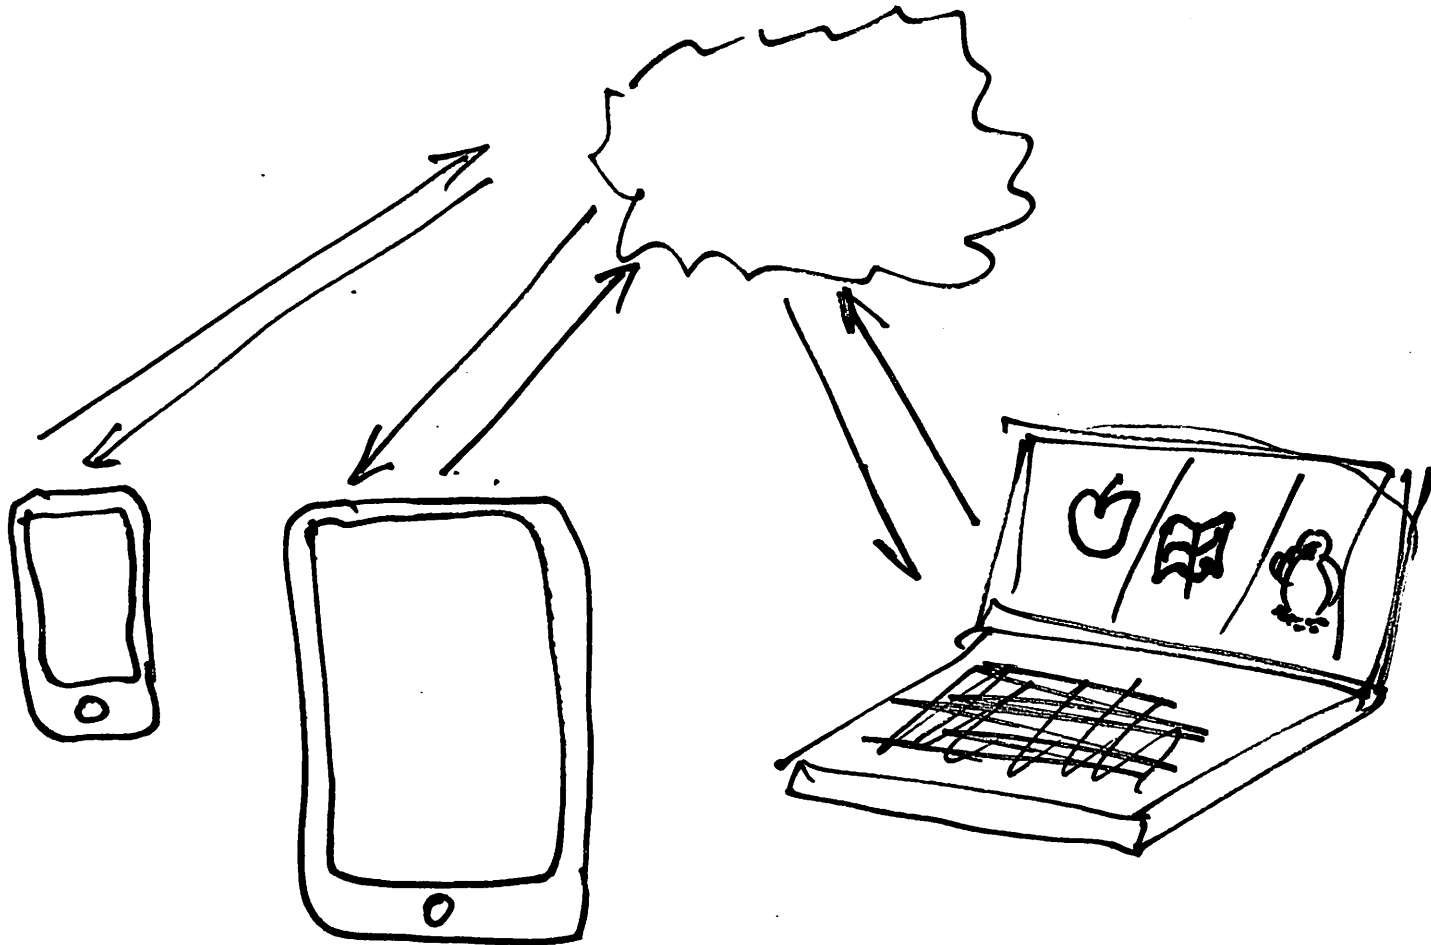

But, where? Here vs. there
When? as often as possible

E.g.,

- Dropbox
- box.net
- Windows Live
- iCloud
-

Notes, anybody?

E.g., Evernote

So?

+ Compute + store
mostly "there"

+ Control + interact
mostly "here"

That's the Future

It's just about here!
